

## Linear drives DGPL

**FESTO**

### Key features

#### General

- Compact, installation length relative to stroke
- Very flexible thanks to wide choice of mounting and attachment options
- Adjustable end-position cushioning systems
- Can be combined with the modular system for handling and assembly technology
- Maintenance-free (for up to 5000 km with a recirculating ball bearing guide)
- Wide choice of variants:
  - Extended slide
  - Air connections on both sides
  - Electronic cushioning with Softstop SPC11

#### With recirculating ball bearing guide DGPL-KF-GK/-GV

- Piston  $\varnothing$  18 ... 80 mm
- Stroke lengths from 10 ... 3000 mm
- Backlash-free
- DGPL-GK: standard slide  
DGPL-GV: extended slide
- Precise and rigid guide
- For high loads and torques

#### Protected version DGPL-GA

- Piston  $\varnothing$  18 ... 40 mm
- Stroke lengths from 10 ... 2000 mm
- Guide and slide are fitted with a cover to protect against the ingress of particles from above and from the side
- Backlash-free
- Precise and rigid guide
- For high loads and torques

## Key features

### Guide characteristics

The specifications for forces and torques are based on the variant with standard slide (GK).  
The values for the other variants can be found in the relevant catalogue data sheet.

## Data sheet

### Characteristic load values for axis with recirculating ball bearing guide KF or protected version GA

The indicated forces and torques refer to the centre of the guide rail. These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

If the drive is simultaneously subjected to several of the indicated forces and torques, the following equation must be satisfied in addition to the indicated maximum loads:

$$\frac{F_y}{F_{y_{max.}}} + \frac{F_z}{F_{z_{max.}}} + \frac{M_x}{M_{x_{max.}}} + \frac{M_y}{M_{y_{max.}}} + \frac{M_z}{M_{z_{max.}}} \leq 1$$

Data sheet

Operating range of the integrated end-position cushioning PPV

Maximum permissible speed  $v$  as a function of the moving mass  $M$

**Note**  
 The specifications apply to a horizontal mounting position, applied load on top.  
 $m$  = applied load + moving mass  
 → page 7  
 The adjacent graph refers to  $r_{max}$ .

Pneumatic linear drives

with slide DGPL

The end-position cushioning must be adjusted to ensure jerk-free operation. If the operating conditions are outside the permissible range, the load to be moved must be externally cushioned using suitable equipment (shock absorbers, stops, etc), preferably at the centre of gravity of the load.

$r_{max} = 20$  mm  
 for piston  $\varnothing 18$  mm

$r_{max} = 50$  mm  
 for piston  $\varnothing 25 \dots 80$  mm  
 (specifications for larger load distances on request)

**Note**  
 Evenness of applied loads for pneumatic linear drives with slide DGPL: to prevent the guide elements from tightening or slackening, the support surface for the assembly must maintain an evenness of 0.03 mm.

Max. permissible support spacing  $l$  depending on the force  $F$

The axis may need to be supported with central supports MUP in order to limit deflection in the case of long strokes. The following graphs can be used to determine the maximum permissible support span  $l$  as a function of force  $F$  acting on the axis.

Force on the surface of the slide
